Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1, 3-10, 11-21 drawn to methods of treating or detecting non-malignant skin lesions using an effective amount of a precursor of protoporphyrin IX, classified in class 514, subclass 561.
- II. Claims 2-10 drawn to methods of detecting non-malignant lesions of the skin by administering an agent which is not a photosensitizer but induces the synthesis of protoporphyrin IX in vivo, classified in class 424, subclass 9.6.

The inventions are distinct, each from the other because of the following reasons:

Claims 3-10 link inventions I with II. The restriction requirement among the linked inventions is subject to the nonallowance of the linking claim(s), claims 3-10. Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application. Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Claims 1-21 are generic to a plurality of disclosed patentably distinct species comprising:

- The specific precursor of protoporphyrin IX,
- The specific agent, which is not a photosensitizer but induces the synthesis of protoporphyrin IX in vivo.
- Methods of administration either topically or systemically
- Wavelengths of lights used for detecting or wavelengths of lights used for treatment of the skin lesion.

Each recited species make the search burdensome because it would modify the process steps and the scope of the claimed treatment method. For example, precursors of protoporphyrins or agents that induce the synthesis of protoporphyrin include various nonanalogous compounds such as glycine, succinyl CoA, porphobilinogen, tetrapyrroles, etc... which do not share a common core. Each of such compounds can be classified in a different class. Accordingly, the search of the entire scope of the invention would be burdensome. Thus, Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

A telephone call was made to Mary Till on June 26, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Shahnam Sharareh whose telephone number is 571-272-0630. The examiner can normally be reached on 8:30 am - 6:00 pm.
